» Data source: FPL bill based on rates effective April 2016. Edison Electric Institute (EEI) Typical Bills and Average Rates Report for Summer 2015 based on utility rates effective July 2015. Averages only include utilities that report their rates to EEI and may not be all-inclusive.

» FPL bills include the state gross receipts tax but do not include credits, local taxes or fees that may be applicable in some jurisdictions.

We work hard every day to provide you with electric service that's cleaner and more reliable than ever before, at a price that's lower than it was a decade ago and among the lowest in the nation. The benefits we deliver to your business are the direct results of smart, long-term investments we've made in advanced technologies and cost-saving efficiencies. In order to support continued investments in our infrastructure that will improve electric service reliability, reduce emissions, enhance generation fuel efficiency, and strengthen our electric system to make it more resilient in severe weather, we filed a comprehensive four-year rate plan with the Florida Public Service Commission for new base rates that would begin in 2017.

Our proposed plan would phase in three base rate adjustments over a four-year period, starting in 2017. Based on our current projections for fuel and other costs, we estimate typical business customer bills to increase approximately 2 to 6 percent annually from 2016-2020, depending on the rate class. Even with the change, we estimate that typical business customer bills in 2020 will still be lower than they were in 2006, and will remain among the lowest in the state and nation based on current bill comparisons.

The proposed plan is designed to continue supporting investments that result in tangible benefits for your business while providing longer-term cost certainty and service that is ranked among the cleanest and most reliable in the nation.
